ASTM MNL20 - Corrosion Tests and Standards: Application ...

The salt spray test is a standardized and popular corrosion test method, used to check corrosion resistance of materials and surface coatings. Usually, the materials to be tested are metallic and finished with a surface coating which is intended to provide a degree of corrosion protection to the underlying metal. Salt spray testing is an accelerated corrosion test that produces a corrosive attack to coated samples in order to evaluate the suitability of the coating for use as a protective finish

Cyclic Corrosion Testing (CCT) has evolved in recent years, largely within the automotive industry, as a way of accelerating real-world corrosion failures, under laboratory controlled conditions. As the name implies, the test comprises different climates which are cycled automatically so the samples under test undergo the same sort of changing environment that would be encountered in the ...

Cyclic corrosion testing - Wikipedia

Corrosion reference standard samples made at PH Tool™ are achieved by machining artificial defects in the workpiece rather than inducing actual corrosion. This keeps the features very controllable, repeatable, and most importantly, measurable. Corrosion patterns can be machined on any metal component and arranged in irregular configurations that closely simulate real-world conditions.
